**Subject:** RE: ECY 13-0011 - Sol Duc Hatchery Improvements project - Comments

Sonia, Thank you for coordinating the Department of Ecology's comments on Washington Department of Fish and Wildlife's proposed hatchery improvement project at our Sol Duc Hatchery. WDFW does not suspect the contamination of soil or ground water at this site. However in the event that if there were reason to suspect or we encounter contamination, we appreciate Connie's well advised directions and proper action requirements.

WDFW also supports Mike's encouragement and advise to recycle as much material associated with this project's site preparation and new construction activities. WDFW also appreciates the information provided by DOE to ensure materials that cannot be recycled on site, can be disposed in manner that allows others to have access and usage through Ecology's 1800 Recycle Hotline database.

Thank you for Ecology's timely and helpful comments.

With High Regards;  
Larry Peck
